Microsoft Copilot

- Integration of Copilot with Power Automate allowing the creation of automation flows based on natural language.
- Analysis tabs to assist with identifying trends and anomalies in the business data.
- Management of e-documents in the purchase process, allowing the specification of purchase document type to create when receiving e-invoices from vendors.
- Creation of item information and descriptions from item data such as variants, dimensions and item substitutions.
- Bank account reconciliation. Enhanced transaction matching during the reconciliation process.
- Assist with suggestions for sales lines on quotes, orders and sales invoices.

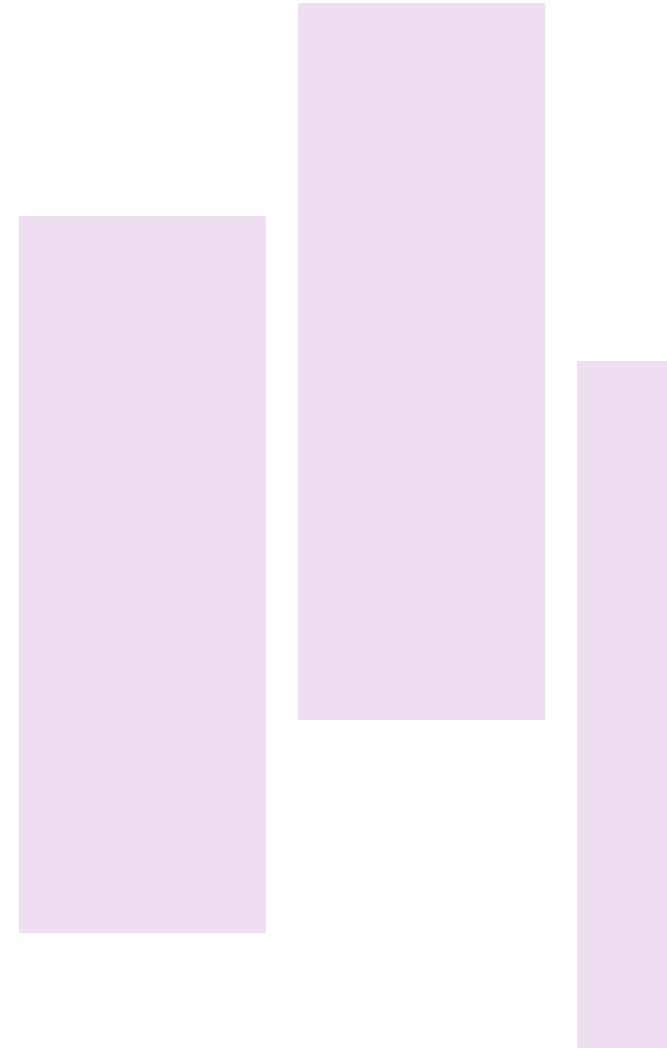

Projects

- An improved and simplified invoicing process. This will allow the creation of a single invoice for a customer with multiple projects in flight.
- Specify bill-to and sell-to customers on each project line.
- The ability to copy timesheets from previous periods, saving time for end user timesheet creation and submission.
- Archiving and restoration of projects.
- Assemble to Project allowing assembly orders to be automated from the project planning lines.
- Default assigning of location and bin when creating tasks, planning lines and journal lines.

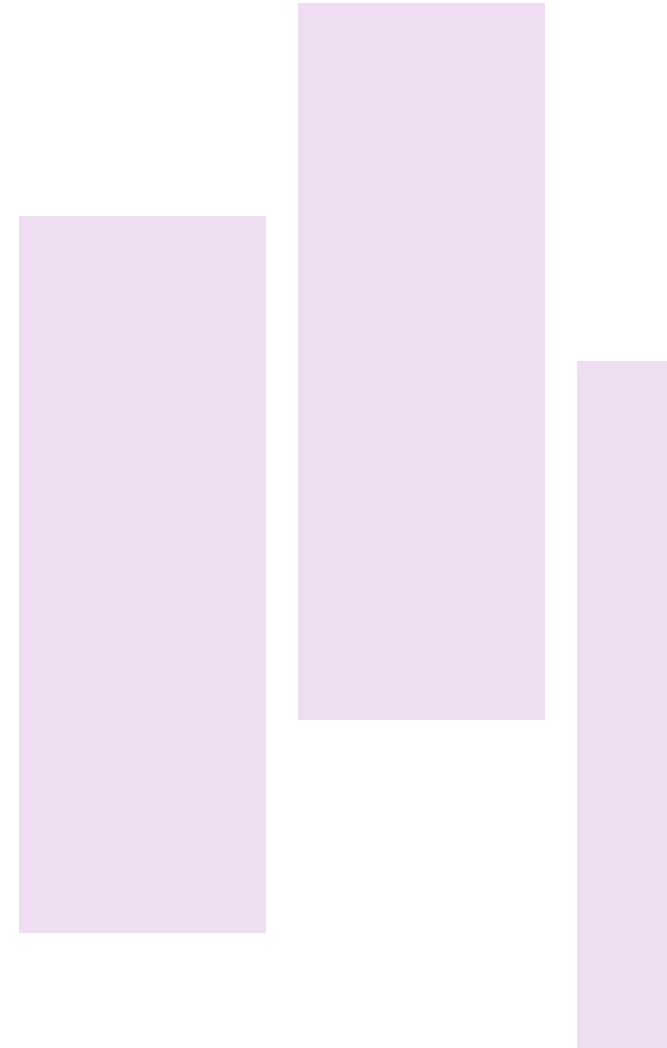

Sustainability Compliance

- Allows the collection of data and reporting on a wide range of sustainability activities.
- Record data using sustainability journals and recurring sustainability journals.

User Experience

- Enhanced drag and drop functionality allowing the attachment of multiple files to records in Business Central.
